The Fund seeks to track the performance of an index composed of US Dollar denominated investment grade corporate bonds.

KEY BENEFITS

- 1 Diversified exposure to corporate bonds issued in US Dollar
- 2 Direct investment in corporate bonds across sectors (industrials, utilities and financial companies)
- 3 USD denominated investment grade corporate bond exposure

**Key Risks:** Credit risk, changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential or actual credit rating downgrades may increase the level of risk. Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

The figures shown relate to past performance. Past performance is not a reliable indicator of future results and should not be the sole factor of consideration when selecting a product or strategy. Share Class and Benchmark performance displayed in USD, hedged fund benchmark performance is displayed in USD. Performance is shown on a Net Asset Value (NAV) basis, with gross income reinvested where applicable. Performance data is based on the net asset value (NAV) of the ETF which may not be the same as the market price of the ETF. Individual shareholders may realize returns that are different to the NAV performance. The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation. ## GLOSSARY

**Total Expense Ratio (TER):** A measure of the total costs associated with managing and operating a fund. The TER consists primarily of the management fee plus other expenses such as trustee, custody, or operating expenses. It is expressed as a percentage of the fund's total net asset value.

**Distribution yield:** The distribution yield represents the ratio of distributed income over the last 12 months to the fund's current Net Asset Value.

**Effective Duration:** is a measure of the potential impact on a bond or portfolio price of a 1% change in interest rates across all maturities. It takes into account the possible changes in expected bond cash flows for bonds with embedded optionality (for example the bond issuer's right to redeem bonds at a pre-determined price on certain dates) due to the 1% change in rates.

**Product Structure:** Indicates whether the fund buys the actual underlying securities in the index (i.e. Physical) or whether the fund gains exposure to those securities by buying derivatives, such as swaps (known as 'Synthetic'). Swaps are a form of contract that promises to provide the return of the security to the fund, but the fund does not hold the actual security. This can introduce a risk that the counterparty defaults on the "promise" or contract.

**Weighted Average Maturity (WAM):** A bond's maturity is the length of time until the principal amount of the bond is to be repaid. WAM of the ETF is calculated as the average of the underlying bonds' maturities, adjusted to take account of their relative weight (size) within the fund.

**Weighted Average Coupon (WAC):** The coupon is the annual interest rate paid by a bond issuer on the face value of the bond. WAC of the ETF is calculated as the average of the underlying bonds' coupon rates, adjusted to take account of their relative weight (size) within the fund.

**Methodology:** Indicates whether the product is holding all index securities in the same weight as the index (replicating) or whether an optimised subset of index securities is used (optimised/sampled) in order to efficiently track index performance.

**Weighted Average Yield to Maturity:** The rate of return anticipated on a bond, if it is held until maturity. Yield to Maturity of the ETF is calculated as the average of the underlying bonds' yields, adjusted to take account of their relative weight (size) within the fund.
